PROFESSIONAL SUMMARY

I'm a blockchain developer and full-stack engineer with expertise in building decentralized applications, smart contracts, and modern web solutions. My focus is on creating secure, efficient, and user-friendly applications.

EXPERIENCE

Blockchain Development Intern — [Lirion]

ERC-3643 Compliant Tokenization Platform

Solidity • Node.js • React

- Built a permissioned asset-token system using ERC-3643 with identity registry, compliance checks, and restricted transfers.
- Integrated off-chain KYC/AML verification with on-chain investor eligibility + blacklist logic.
- Created admin tools for managing identities, permissions, and compliance states.

AES-RSA Secure Compute System with TEE & ZK

Confidential Encryption Engine using AES-RSA, TEE & Zero-Knowledge Proofs

Node.js • Intel SGX/TEE • Cryptography • ZKP

- Built a hybrid encryption system using AES for data encryption and RSA for key exchange, executed inside a Trusted Execution Environment (TEE) for maximum security.
- Implemented enclave-level key generation, signing, and decryption to prevent private-key leaks and ensure hardware-isolated execution.
- Added Zero-Knowledge Proofs (ZKPs) to verify computations and data validity without revealing sensitive information.
- Exposed a secure API to process encrypted files/messages end-to-end with confidentiality, integrity, and verifiable trust.

EDUCATION

B.Tech: Computer Science & Engineering, Expected in 01/2027

ITM SLS BARODA

- Pursuing
- GPA: 9.36

Higher Secondary Certificate: 01/2023

Phoenix Institute of Baroda

Secondary School Certificate: 01/2020

Kendriya Vidyalaya

SKILLS

- Languages: Solidity, JavaScript, TypeScript, HTML/CSS, Python, C/C++, SQL
- Frameworks/Tools: React, Express, Foundry, Web3, Git, GitHub, MongoDB, Hardhat, Remix

PROJECTS

Decentralized Multi-Swap Exchange

Smart contract-based multi-swap exchange with real-time trading, liquidity pools, and gas-optimized architecture using Foundry and Solidity. Supporting Uniswap V2 and V3, SushiSwap and PancakeSwap.

AgriChain dApp | Solidity, Foundry, React, IPFS

Full-stack application for tracking DeFi investments across multiple chains with real-time price updates and yield farming analytics. Lead a group for Hackathon . Deployed with proper testing and Gas Optimized for L2.

Mystery Word | React

Developed a mystery word game featuring interactive gameplay and dynamic word challenges. Built using React, JavaScript, and HTML/CSS for engaging UI, implemented logic for word generation, hints, and scoring, and optimized for a responsive, user-friendly experience across all devices.

WalletWave | Solidity, React, Ether.js , ChainLink Oracles

Developed a decentralized wallet platform supporting secure transactions and token management. Built and tested smart contracts using Solidity and Foundry, integrated Web3/Ether.js for blockchain interaction, and designed a responsive React-based frontend for seamless user experience.

FlashLoan Arbitrage Bot | React , Express, Web3

Developed a Flash Loan Arbitrage Bot enabling zero-collateral loans to execute atomic arbitrage trades across decentralized exchanges. Built and tested smart contracts using Solidity and Foundry, integrated Web3/Ethers.js for blockchain interaction, and designed a React-based frontend for real-time profit tracking and seamless execution.
